

Fuel Economy

Did you know:

- That replacing a clogged air filter can improve your car's gas mileage by as much as 10 percent.
- You can improve your gas mileage by around 3.3 percent by keeping your tires inflated to the proper pressure.
- That the way you drive your vehicle has one of the biggest effects on your fuel economy.

For those who drive with a heavy foot and accelerate quickly from every stoplight/sign, your Fuel Economy will be considerably less than those folks who accelerate gradually from the stoplights/signs and maintain steady speed driving.

- That an engine that is not properly tuned-up or a vehicle that has a defective oxygen sensor can decrease your Fuel Economy by as much as 40%.
