

# Tire Pressure

## Did you know:

- That it is not uncommon for your tires to loose one pound of air during normal driving over one months time
- That temperature changes of 10 degrees can cause changes in your tire pressure by as much as one pound
- That low tire pressure will reduce your gas mileage
- That low tire pressure can change the way your vehicle handles on the road
- That low tire pressure can cause abnormal wear on your tires
- Checking your tire pressure when the tires are hot may give you a false indication of your tire pressure. Let the tires cool down before checking the air pressure.
